

*“Architecture is the masterly, correct and magnificent play of masses brought together in light.”*  
(Le Corbusier)

## REVEAL WITH LIGHT

Light, the noblest of the elements, is the only element that allows us to perceive spaces and shapes by revealing the nature of things.

Glip accompanies the best architects and designers to illuminate their ideas by combining technology and masterly craftsmanship in new sources of light.

Glip - the lighting partner - is an illumination technology company that specialises in the production of custom-made products with cutting-edge LED technology.

Founded by the Piovesan family in Venice in 1996, today we plan and realise lighting structures for all architectural projects: from prestigious dwellings to installations for great works. We create important fittings with minimal or decorative designs, for both indoor and outdoor use.

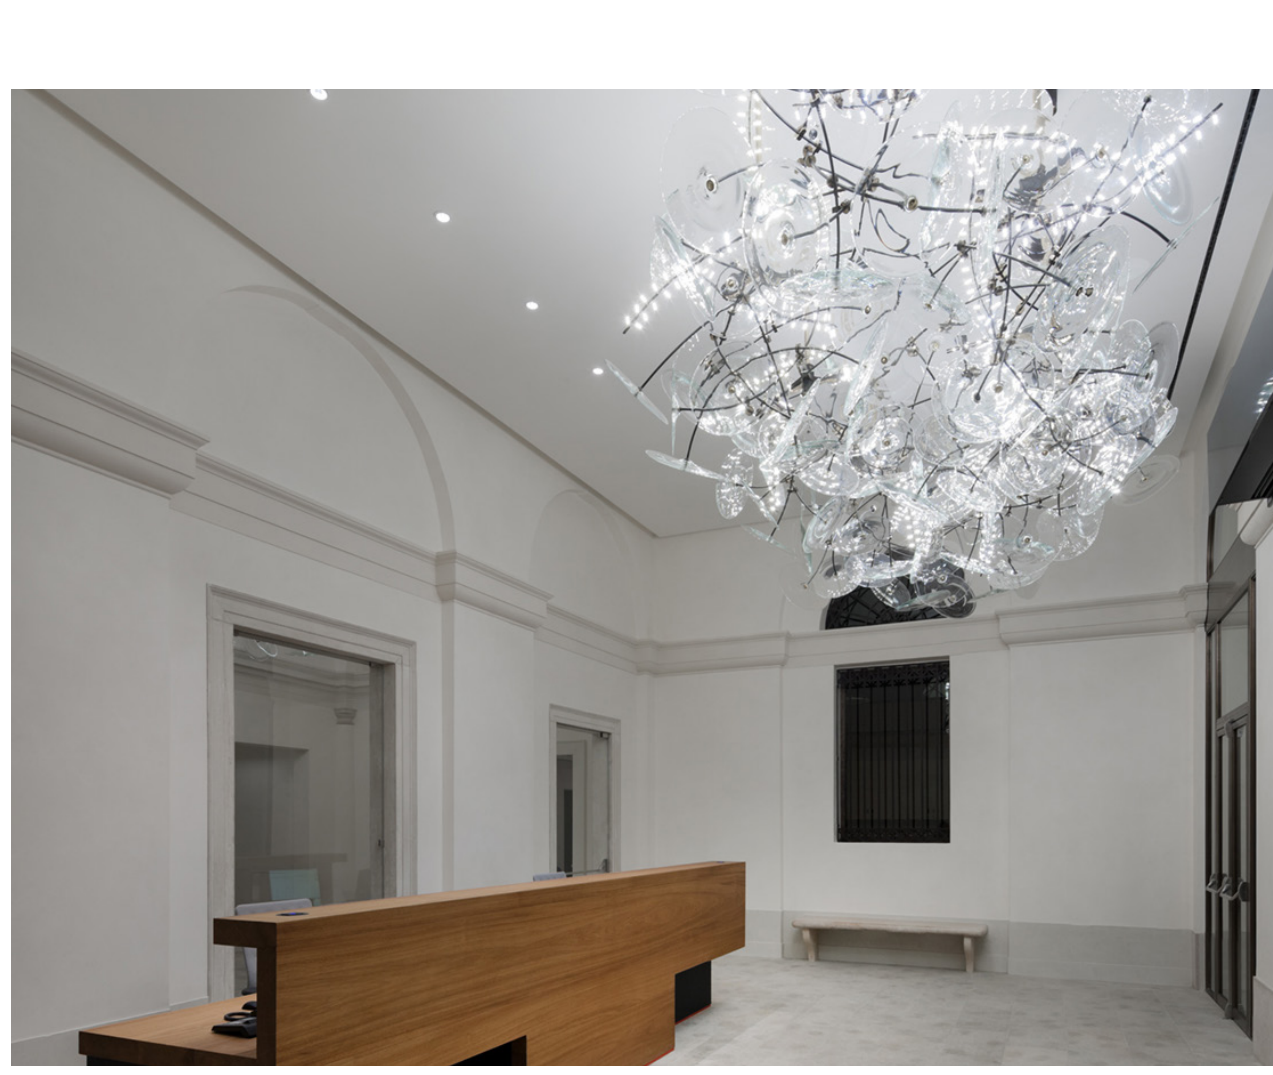

We are the partner of leading companies at an international level, and collaborate with important architecture and engineering studios. We give technical and planning support to important players in the lighting technology sector.

With Glip, the vision of the architect, as well as engineering demands and the needs of general contractors, become tangible. Our R&D office can engineer lighting structures and produce prototypes that will satisfy even the most complex requests in short time-frames. Our production team can bring important custom or catalogue commissions to life internally. The Made in Italy seal is strengthened by a wide network of partners, whose knowledge is based in the craftsmanship of the region, from the processing of metals to the production of elements in Murano glass.

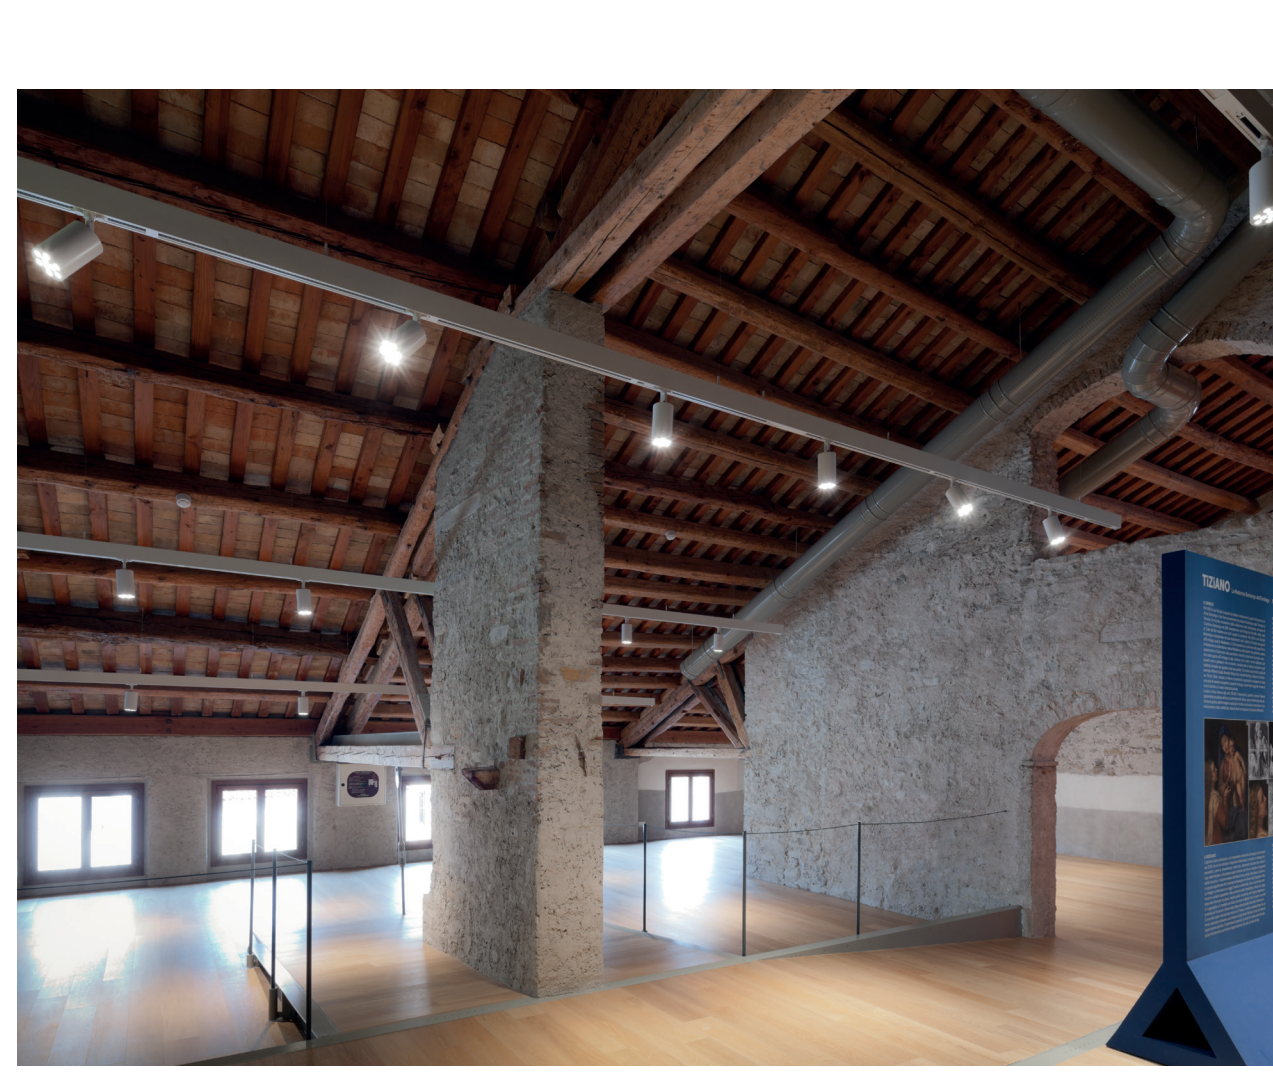

All our products are produced in alignment with current regulations. We collaborate with national and international certification bodies to respond to the needs of every single destination market for each product.

All of these characteristics, together with the passion and dedication of our staff, make our company the perfect partner for ambitious professionals with particular needs, such as:

- Architects
- Engineers
- Lighting designers
- Interior designers
- Lighting specialists
- General contractors
